Here Are The Steps Taken To Diagnose Any Problem:

- Your equipment is thoroughly cleaned to remove all contamination.
- Diagnostic tests are used to locate any defective components.
- Circuit analysis isolates marginal components.
- Defective and marginal components are replaced with parts that meet original manufacturers' functional specifications.
- State-of-the-art equipment verifies total circuit board quality.
- Circuit boards are coded and tagged.
- Handling, packaging, and shipping are performed in a static-free environment.
